Summary

Industrial engineer with an MSc in Industrial Mathematics, specialized in Computational Fluid Dynamics (CFD), numerical simulation and multiphysics modelling. Experience in R&D projects applying OpenFOAM, ANSYS Fluent and Python to solve fluid mechanics problems. Focused on developing advanced engineering through numerical simulation.

Technical Skills

CFD Softwares: OpenFOAM, ANSYS Fluent, HyperWorks

Programming Languages: Python, MATLAB

CAD Softwares: AutoCAD, SolidWorks, ANSA

Projects

UAH Motorsport Sep 2021 – Sep 2023
Formula Student *SolidWorks, MATLAB, MSC Adams Car*

- Designed suspension components using CAD tools and Finite Element Analysis (FEA)
- Developed the front impact attenuator in compliance with Formula Student regulations
- Contributed to the optimization of the vehicle's dynamic performance

Experience

CFD Engineer Oct 2026 – Present
Engineering Simulation Consulting S.L. *Madrid, Spain*

- Preparation and updating of geometric models and meshes using ANSA and HyperWorks
- Involvement in structural simulation and rheology projects, including model preparation and simulation pre- and post-processing
- Exposure to different numerical simulation methodologies and CAE tools in multidisciplinary engineering environments

CFD Engineer Intern Feb 2026 – May 2026
Técnicas y Servicios de Ingeniería S.L. *Madrid, Spain*

- Performed CFD simulations around a marine propeller using OpenFOAM
- Coupled CFD results with an acoustic propagation model to predict URN
- Developed a Python implementation of the Ffowcs Williams–Hawkings acoustic analogy
- Executed large-scale CFD simulations on the FinisTerrae III (CESGA) within a Linux-based HPC environment managed with Slurm.

Education

Universidad Carlos III de Madrid Leganés, Madrid
M.S. in Industrial Mathematics *Sep 2024 – Jul 2026*

Universidad de Alcalá Alcalá de Henares, Madrid
B.S. in Industrial Engineering *Sep 2019 – Sep 2024*

Languages

- Spanish - Native
- English - B2 (Cambridge)
